

## Financial planning

Where are you now?  
How'd you get there?  
Where do you want to be?  
How're you going to get there?

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## Financial planning

Process of developing and implementing a coordinated series of strategies to achieve your **financial goals**

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## Financial goals

- Establish **specific** short-term and long-term goals – where do you want to be?
- To be of value, your goals must be
  - Measurable
  - Attainable
  - Relevant
  - Time-related
- Vague goals such as to buy a car, retire early, own a house are worthless

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## A specific short-term goal

- Buy a new **\$35,000** SUV in **4 years**
  - You estimate trade-in will be worth \$5,000
  - You're willing to borrow \$10,000
  - You need to save the remaining \$20,000
  - If interest rate  $i = 6\%$  per year
    - $20,000 = PMT(FVIF_a - 6/12 - 4 \times 12)$ 
      - $-20,000 \Rightarrow FV \quad .5 \Rightarrow i \quad 48 \Rightarrow n \quad PMT = \$370$  per month
    - **You need to save \$370 each month**
      - Measurable, attainable(?), relevant, time-related

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## A specific long-term goal

- Have a **\$1,000,000** nest egg at **age 65**
- If you assume you can earn **8%** per year
- $FV = PMT(FVIF_a - i\% - n)$
- $1,000,000 = PMT(FVIF_a - 8\% - 45)$ 
  - $-1,000,000 \Rightarrow FV \quad 8 \Rightarrow i \quad 45 \Rightarrow n \quad PMT = \$2,587$
- You need to invest \$2,587 each year**
  - Measurable, attainable(?), relevant, time-related

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## Checking your financial health

- Financial statements
  - Where are you today?
  - How'd you get there?
- Financial ratio analysis
  - Where are you strong?
  - Where are your weak?
  - Can you take steps to fix any deficiencies?

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## Financial statements

### □ **Balance sheet**

- Snap-shot of your financial position **at a particular point in time**, say Dec. 31, 20XX
  - Your **assets** (what you own)
  - Your **liabilities** (what you owe)
  - Your **net worth** or **equity** (assets – liabilities)

### □ **Income and expense statement**

- Record of what you spent and received **over a period of time**, say May 20YY or all of 20ZZ

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## Balance sheet components

### □ **Assets**=> everything you own stated **at its fair market value** – not what you paid for it

- Liquid assets=> cash, checking accts, savings accts, CD's (Wachovia, not Barry Manilow)
- Tangible assets=> **car, house**, appliances, furnishings, jewelry, tools, stereo
- Capital assets=> stocks, bonds, mutual funds, insurance policies, retirement plans, IRA's, real estate holdings

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## More BS

### □ **Liabilities**=> everything you owe (**debts**)

- Short-term (due < 1 year)=> your credit card and charge acct **balances**, personal loans
- Long-term (due > 1 year)=> **unpaid balance** on your **car loans, mortgages**, school loans
  - Your **car and your house are assets; the loans you took out to buy them are liabilities**

### □ **Net worth or equity** = assets – liabilities

- To increase your net worth, you need to spend less than you make

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## Two diverse examples

### The Cleavers

As of June 30, 20XX

Assets		Liabilities	
Cash	\$560	Credit card debt	\$1,875
Checking	1,400	Car loans	32,725
Savings	4,700	Mortgage	275,500
CD	7,000	<b>Total liabilities (debt)</b>	<b>\$310,100</b>
<b>Total liquid assets</b>	<b>\$13,660</b>	<b>Net worth (equity)</b>	<b>\$175,560</b>
Home	315,000		
Cars	85,000		
Personal property	27,500		
<b>Total tangible assets</b>	<b>\$427,500</b>		
Vanguard mutual funds	18,700		
BellSouth Stock	7,500		
IRA	10,750		
Life insurance cash value	7,550		
<b>Total capital assets</b>	<b>\$44,500</b>		
<b>Total assets</b>	<b>\$485,660</b>		

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

---

---

## Income and expense statement

- Income (what you took in)
  - Salaries and wages
  - Bonuses and commissions
  - Income from sale of assets
  - Interest and dividends
  - Gifts
- Expenses (what you spent it on)
  - Fixed expenses
  - Variable expenses

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## Fixed expenses

- Fixed=> same each month, stuck with them
  - Housing (rent, mortgage & property taxes)
  - **Savings and investment – “pay yourself first”**
  - Car (monthly payment or lease)
  - Insurance (life, homeowner’s, car)
  - Installment loan payments (appliances, TV)
  - Taxes (federal, state and local income)
  - **Retirement plan contributions (401(k), IRA)**

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## Variable expenses

- Variable=> you may have some control
  - Utilities (electricity, water, phone, cable)
  - Meals (home and away – maybe split up)
  - Medical expenses
  - Transportation (gas, car maintenance)
  - Education
  - Child-care (day-care)
  - Entertainment
  - Miscellaneous (break out if significant to you)

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## Your surplus

- Your income minus all your expenses is your surplus
- You can
  - Spend it on stuff
  - Invest it in stocks, bonds, mutual funds
  - Save it for a rainy day
    - Use it when you have a loss in a future period

---

---

---

---

---

---

---

---

---

---

## Now what?

### Financial ratio analysis

- You can calculate a few basic financial ratios using data from your balance sheet and income & expense statement
- Then you can look at the trends of these ratios over time to see if you're improving your financial health
- Many ratios are possible – we'll discuss 4

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## Liquidity ratios

- **Liquidity ratios** => ability to *quickly* convert your assets to cash *without loss of value*
  - **Basic liquidity ratio** => how many months could your family pay its expenses from liquid assets alone (say you lose your job!)
  - **Basic liquidity ratio** = liquid assets/monthly expenses
  - Experts recommend 3 months minimum
  - Cleavers' liquidity =  $13,660 / (75,700/12 \text{ months}) = 2.2 \text{ months}$

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## Debt ratios

- **Debt ratios** => ability to handle your present debt situation - is debt a burden?
  - **Debt to asset ratio** => the percentage of your assets financed by debt or creditors
  - **Debt to asset ratio** = total debt / total assets
    - Measures solvency and ability to pay debts
    - Cleavers' D/TA =  $310,100 / 485,660 = 64\%$ 
      - Dangerously high due to mortgage and car loans
      - Strive to pay off car loans ASAP and pay down mortgage

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## Another debt ratio

### ❑ Debt picture from a different angle

- Debt-service coverage ratio => number of times the ability to pay exceeds amount due
- Debt-service coverage ratio = gross income / annual debt payments (interest + principal)
  - ❑ Measures whether you earn enough to adequately service your debts – should be 2.8 or higher
  - ❑ Cleavers' coverage =  $103,300 / (18,700 + 7,200) = 4.0$
  - ❑ 103,300 = income 18,700 = mortgage 7,200 = car loans

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## Income producing ratio

### ❑ Accumulating income producing assets

- Capital assets to net worth ratio => measures capital assets as a percent of your net worth
- Capital assets to net worth = capital assets / net worth
  - ❑ Should be at least 50% but will be less for Joe who has few capital assets
  - ❑ Cleavers' ratio =  $44,500 / 175,560 = 25\%$
  - ❑ Good measure of whether you're building for your future by accumulating investment assets

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## Ratios can be deceiving

- ❑ Beaver finds \$10,000 in the backyard – what should the Cleavers do with it?
- ❑ Invest in capital assets?
  - Capital assets and net worth both +\$10,000
  - Capital assets/net worth rises to  $54,500 / 185,560 = 30\%$
- ❑ Pay off car loan or put toward mortgage?
  - Assets +0, net worth +10,000 and liabilities -10,000
  - Capital assets/net worth falls to  $44,500 / 185,560 = 24\%$
- ❑ If ratio rises, building for future but paying down debt is smarter if interest rate is high

Copyright ©2007 Stephen G. Buell

---

---

---

---

---

---

---

---

## The Cleavers invest \$10K

As of June 30, 20XX

Assets		Liabilities	
Cash	\$560	Credit card debt	\$1,875
Checking	1,400	Car loans	32,725
Savings	4,700	Mortgage	275,500
CD	7,000	<b>Total liabilities (debt)</b>	<b>\$310,100</b>
<b>Total liquid assets</b>	<b>\$13,660</b>	<b>Net worth (equity)</b>	<b>\$185,560</b>

## Follow your gut

- Balance sheets and income & expense statements and financial ratios are tools
- Use them as guides, not ultimate goals
- As you get older and earn more, your ratios will get better, but don't make dumb decisions just to look good on paper
- But at the same time, don't forget car dealers and mortgage lenders will also be calculating your ratios
